In Lee et al. (2010) a nonlinear observer is used which allows to obtain better performance in the low speed region with torque steps. The observer used in Lee et al. (2010) is combined with the estimation of the flux linkage constant in Choi et al. (2017), which allows to significantly increase algorithm performance.

In this paper, a sensorless control strategy of a permanent magnet synchronous machine (PMSM) based on an improved rotor flux observer (IFO) is proposed. Due to the unknown integral initial value and the high harmonics caused by current sampling and inverter nonlinearities, the flux linkage estimated by traditional rotor flux observer may be inaccurate.
