Chapter 6 slides, Computer Networking, 3rd edition
Networking today is much more (and far more interesting) than standards specifying message formats and protocol behaviors. Professors Kurose and Ross focus on describing emerging principles in a lively and engaging manner and then illustrate these principles with examples drawn from Internet architecture.

If so, it pre-allocates channel resources (e.g., time slots) on its radio access network and other resources for that device. This pre-allocation of resources frees the mobile device from having to go through the time-consuming base-station association protocol discussed earlier, allowing handover to be executed as fast as possible.

Interactive Problems, Computer Networking: A Top Down Approach
With this edition, Kurose and Ross bring the issues of network security to the forefron Building on the successful top-down approach of previous editions, the Fourth Edition of Computer Networking continues with an early emphasis on application-layer paradigms and application programming interfaces, encouraging a hands-on experience with ...

Browser Caching. Consider an HTTP server and client as shown in the figure below. Suppose that the RTT delay between the client and server is 30 msec; the time a server needs to transmit an object into its outgoing link is 0.5 msec; and any other HTTP message not containing an object has a negligible (zero) transmission time.

Computing TCP's RTT and timeout values. Suppose that TCP's current estimated values for the round trip time (estimatedRTT) and deviation in the RTT (DevRTT) are 370 msec and 41 msec, respectively (see Section 3.5.3 for a discussion of these variables). Suppose that the next three measured values of the RTT are 400 msec, 260 msec, and 370 msec respectively.
