Wildlife gardening involves providing food and habitats for wildlife, in our gardens. Many wild species - such as bees, butterflies, hedgehogs and amphibians - are suffering huge declines, thanks to a combination of habitat loss, pesticides and climate change.

~~Wildlife Gardening — BBC Gardeners' World Magazine~~

As wildlife habitats in the countryside disappear at an alarming rate, our gardens are increasingly useful habitats for wildlife. They help to form 'green corridors' in our towns and cities, increase biodiversity and provide shelter and food for a huge range of species.

Butterflies are cold-blooded insects that require the sun's warmth to help their bodies work. However, you can grow both host and nectar flowering plants in shaded gardens adjacent to sun-drenched areas like driveways or patios, and still, attract winged visitors. In addition to butterflies seeking shelter from wind and rain, woodland butterflies like those in the satyr group may flit amongst ...

~~Butterfly Flowers for Shade Gardens — Make Your Best Home~~

Gardening is the practice of growing and cultivating plants as part of horticulture. In gardens, ornamental plants are often grown for their flowers, foliage, or overall appearance; useful plants, such as root vegetables, leaf vegetables, fruits, and herbs, are grown for consumption, for use as dyes, or for medicinal or cosmetic use. Gardening ranges in scale from fruit orchards, to long ...

For information on bulbous-type herbaceous perennials (daffodil, canna, dahlia, etc.), refer to Extension bulletin 918, Flowering Bulbs for Georgia Gardens. Use. There has been a resurgence of interest in perennials. Home gardeners are becoming more aware of perennials and so are commercial landscapers.
