Labour constants may be roughly defined as a guide of “how much work someone can do in how much time”. In reality, this is not an exact science and requires considerable experience, skill, intuition, historic data and some practical application & risk to define and to implement. There will be variations from project to project, site to site, sub-contractor to sub-contractor ... and these can be considerable.

Basic principles for Estimating Labour ('d)(cont'd) Hours Straight Time Rate (RM/hr) Total cost. Bricklayers 3 bricklayers x 3 days x 8 hr/day = 72 hrs RM 50 RM 3,600.00 General labour 2 general labourx 3 days x RM 20 RM 960.00 8hr/day = 48 hrs Total RM 4560.00. Monetary Factors.

Estimating the Cost of Labour

The labour constants are for the major items of “on-site” works for which rates are given in the “Detailed Trade Rates” section. The constants are intended as an average guide only, and 'labour factor' could be considered a better term, as the labour content of work items can vary considerably depending on the circumstances.
