Scuba Rescue Skills And Techniques - HPD Collaborative One of the most important self-rescue skills can be easily practiced at the surface: ditching weights. Unbuckling a weight belt or pulling the weight releases doesn't sound like much of a skill, but it's amazing how often dead divers are recovered with weights still in place. Scuba Diving Self-Rescue | Scuba Diving

Scuba Rescue Skills And Techniques - HPD Collaborative

One of the most important self-rescue skills can be easily practiced at the surface: ditching weights. Unbuckling a weight belt or pulling the weight releases doesn't sound like much of a skill, but it's amazing how often dead divers are recovered with weights still in place.

Scuba Diving Self-Rescue | Scuba Diving

As with most scuba diving courses, you will complete theory alongside your practical skills. This will include understanding the psychological aspect of a rescue situation; beginning with a stop, think, act mentality, and covering the practicalities of managing an emergency situation such as delegating to others.

Everything you need to know about your Rescue Diver Course ...

While there is almost no way to unjam an inflator underwater, it is possible to disconnect the low-pressure inflator hose while scuba diving. This cuts off air flow to the buoyancy compensator. The diver can then orally inflate the buoyancy compensator to control his buoyancy until he is able to ascend.

Scuba Diving Basics: Skills and Techniques

You learn to recognize the common signs of stress, typical responses to stressful diving situations, and what scuba equipment is recommended to help you to stay relaxed and enjoy diving. You practice techniques to help you reduce and deal with stress before, during, and after a dive, self-aid and buddy-aid skills for stressful and rescue situations, and techniques for surface and sub-surface diver rescue.

Stress and Rescue Diver - Scuba Venture Inc

Other techniques are generic, such as scanning, risk management (identifying and eliminating conditions that could cause accidents), reaching assists, etc. Most dive rescue techniques do not involve the use of cans or tubes and because of the gear that divers wear, scuba has some very different techniques to fit the circumstances of the rescue.

Transferrable Rescue Skills / ScubaBoard

Students also learn techniques for conducting underwater search and recovery operations, in-water rescue breathing, removing unconscious victims from the water, and managing accident scenes. The Rescue Diver course also helps to develop skills such as self-rescue and situational awareness that will prevent accidents from happening.
