A boiling water reactor (BWR) is a type of light water nuclear reactor used for the generation of electrical power. It is the second most common type of electricity-generating nuclear reactor after the pressurized water reactor (PWR), which is also a type of light water nuclear reactor. The main difference between a BWR and PWR is that in a BWR, the reactor core heats water, which turns to ...

The advantages offered by this hybrid system are that very high-capacity low-weight generators can directly power large loads such as landing gears, swing-wings, tilt-tails, de-icing systems, space-heating, lighting, utility loads, and (in commercial aircraft) galley loads. The dedicated loads such as 270 V d.c. and 28 V d.c. (and special high frequency power supplies) can be derived on an ...
